Healthmark Industries Launches AccuPoint-HC System to Help Reduce HAIs

Written by Rob Kurtz | November 29, 2011

Healthmark Industries Co., which develops products for the sterilization, decontamination, storage and security of surgical instruments and other medical devices and accessories, has announced the launch of its AccuPoint-HC system, designed to help reduce hospital-acquired infections, according to a news release from [Healthmark Industries](#).

The system is designed to analyze a collected sample in 30 seconds and indicate whether a surface is clean. The information is displayed on the reader as well as accompanying Data Manager software.

Features include a flat surface that comes in complete contact with the area being sampled and a self-contained cartridge designed to minimize the opportunity for false positive results from poor collection technique, according to the release.
